

# DIAMANTE PRO

A high capacity back-office note and coin recycling solution for larger retailers with high volume note and coin requirements. Made up of our AST9000 cassette-based note recycler + CDS804 FULL coin recycler.

## Diamante Pro Cash Recycler

Driven by our flexible CAOS device operating system, retailers can customize how the system works, specifically in their environments. The AST9000 note recycler utilizes cassettes for recycling. Each cassette can store up to 3,400 notes of a single denomination making it ideal for stores or environments where cash volumes are extremely high. The AST9000 is highly flexible with the option of dual denomination recycling cassettes. Surplus notes are stored in a dedicated deposit only cassette which can be emptied by the CIT operator.

## Benefits

- Customize till floats and denomination mixes specifically for user types
- Eliminate manual till preparation.
- Quick and automatic till dispense.
- Fast and easy end of day cash up process. Simply pour coins into the try and stack notes into the note feeder.
- Reduce errors by automating the dispense and deposit process
- Recycling reduces overall store cash requirements
- Reduce shrink with quick reconciliation to third party applications
